(54) Title: LIQUID CRYSTAL DISPLAY DEVICE AND DISPLAY APPARATUS HAVING THE SAME

(57) Abstract: The liquid crystal display device includes a back light assembly (200), a receiving container (300) and a liquid crystal display panel (400). The back light assembly (200) generates a first light to transform the first light into a second light having modulated optical characteristics. The receiving container (300) has sidewalls (310) and a bottom face (320). The bottom face (320) includes a combination groove (340) for fixing the liquid crystal display device to an external member. A width of a portion of the combination groove (340) is larger than a width of an entrance of the combination groove (340). The liquid crystal display panel transforms the second light into an image light. The receiving container (300) receives the liquid crystal display panel.
